

4G LTE QUICK START GUIDE

In order to activate your 4G LTE Cellular Enabled Camera, please contact the appropriate cellular carrier (Verizon, AT&T, Bell Canada, Rogers Canada or Telus Canada).

RECONYX® 4G LTE Cameras require a “data plan”. The Camera can either be added to an existing data plan as another “device” or you can start a new data plan depending on your needs.

As a reference, each photo that the camera sends over data is approximately 100KB in size. 1GB of data equates to approximately 10,000 photos transmitted.

You will need to provide the “IMEI” and “SIM card” identification numbers to your cellular carrier in order to activate the camera on their network. This information can be found on a printed label inside the camera, just above the LCD Display.

If you have any questions regarding the activation of your camera, please do not hesitate to contact us toll free 866-493-6064 or support@reconyx.com.
